Billing System

2.0 Billing System

Billing System is the processes that help to create invoices against completed tasks for the customers. The system receives tasks from various networks to process invoice. Each task is associated with rates and available in the rate card. Successful task and job are ready to process invoice in the system. New invoices are approved by the approver before sending the invoices to the customer. Once payment received from the customer, it has been updated in the system to close the transaction.

Billing System is a digital platform or solution that facilitates the electronic generation, dispatch, and tracking of invoices, eliminating the need for traditional paper-based billing methods.
